PolyFlex Products expands to larger facility

PolyFlex Products, Inc., Livonia, MI, is moving its headquarters and manufacturing operations to a 50,000 square foot facility in Farmington Hills, MI. Mark Kirchmer, PolyFlex, CEO, stated “our continued growth during the past decade had forced us to have operations in multiple facilities. This new facility allows us to consolodate everything under one roof while providing additional room for future expansion.

“We recently increased our overall injection molding capacity by 30% and also doubled our foamed urethane capacity with the addition of a new RIM machine. Moving forward, this new facility provides the expansion room needed for our forecasted growth.” he concludes.

The new address is: 23093 Commerce Drive, Farmington Hills, MI 48335.

PolyFlex Products engineers and manufactures plastic, urethane and rubber material handling products including custom returnable part handling containers, protective shipping containers, plus custom and standard dunnage systems. Its sister company, ThermoFlex, has capabilities for heavy-gauge thermoforming, injection molding and cast urethane molding operations.
